

- **Intro.** Hello, my name is Pepper! I was developed by a French and Japanese robotic company, and I'm one of the most widely used social robots. I was built to interact with humans in simple ways, and my conversational skills are still limited. Today, we will play a so-called "investment game" together. Would you like to hear more about me, or should I tell you more about the game?
Option 1: **robot**
Option 2: **game**
- **Robot.** Okay! I'm a social robot, made by a company called SoftBank Robotics. I can move my arms, show expressions with my eyes, and talk using a speaker in my chest. I don't actually think though, I follow a script like a play. Would you like to know how I was programmed, or should I tell you about the game now?
Option 1: **programme**
Option 2: **game**
- **Programme.** I was programmed using a rule-based system. That means I respond based on what people say, but only if they use specific words I recognize. So if you say something I don't expect, I might not reply properly. Sorry in advance! Are you ready to hear about the game, or do you want to hear a cool fact about robots?
Option 1: **cool fact**
Option 2: **game**
- **Cool fact.** Ok, here it is. Currently, there is a robot, Sophia by Hanson Robotics, who is an official citizen of Saudi Arabia. It was the first robot in history to receive legal personhood, in 2017! Now, let's talk about the game.
- **Game.** Great! In this game, we'll play a game called "the investment game". You'll start each round with 10 experimental dollars. You can give some, all, or none of those dollars to me. If you give me any dollars, the amount you invest will be tripled. I'll then decide how many dollars to return to you. I can return none, some, or all. The goal for both of us is to make as much money as possible.
- **Final.** Now, feel free to ask the researcher about anything that might be unclear. I will see you back here in a few minutes, and we will play the game!
